# Support up to 50% more customer requests with up to 70% faster response times

by choosing the Dell EMC™ VxRail™ P470F over the HPE Hyper Converged 380

Support more users with up to 50% more database transactions

Process more customer requests, boost staff productivity, and keep business running smoothly.

Get answers quickly with up to 70% faster response times

Keep your users productive and your customers happy with a great database experience.

Save space on data storage by using up to 71% less capacity

With inline deduplication and compression, store the same amount of data in less than a third of the space of the HPE HC 380.

Double your workload and maintain strong performance

Expand your business with confidence knowing you can keep user experience consistently positive with near-linear performance scaling at sub-10ms latency.

Optimize and scale your environment more easily

Spend less time and effort tuning your environment and scaling up its workload, relying on a high-performing, preconfigured vSAN datastore rather than having to define custom datastores to achieve comparable performance.
