

Dell™ workstations powered by the Intel® Xeon® processor family:

Better performance improves the user experience

versus comparable HP workstations with AMD workstation processors

Workers can be only as productive as their tools allow them to be. On a sluggish system, the most basic office tasks can become exercises in frustration, lowering user productivity and morale.

Principled Technologies ran a series of industry-standard benchmarks to measure system performance. We tested two Dell workstations powered by 2nd generation Intel Xeon processors, a mid-range Dell Precision™ T3500 and a high-end Dell Precision T7500, and two HP workstations powered by AMD processors, a mid-range HP Pavilion Elite HPE-500z and a high-end HP Pavilion Elite HPE-560z.

The Intel Xeon processor-based Dell systems consistently delivered higher benchmark scores—as much as 98.0 percent higher—than the corresponding HP Pavilion systems, making Dell a great choice for productivity in the workplace.

DELL AND INTEL DELIVER PERFORMANCE

Responsive performance enhances worker productivity. That’s why, when choosing desktop systems for the workplace, it makes sense to purchase systems powerful enough to execute tasks quickly and efficiently.

In our tests, we found that the Intel Xeon processor-based Dell Precision T3500 and Dell OptiPlex 990 delivered considerably better performance than comparable AMD processor-based HP systems—enough to improve performance by up to 98.0 percent. (To learn more about the systems we tested, see [Appendix A](#). To learn more about how we tested, see [Appendix B](#).)

SYSmark 2007 Preview v1.06 measures system performance in four workload scenarios: e-learning, office productivity, video creation, and 3D modeling. Figure 1 shows the SYSmark 2007 Preview performance for four workstations. The Dell Precision T3500, with a score of 160, outperformed the HP Pavilion Elite HPE-500z (which had a score of 152) by 5.3 percent. The Dell Precision T7500’s score of 282 was 45.4 percent higher than the HP Pavilion Elite HPE-560z score of 194.

MAXON CINEBENCH consists of two main components. The first test sequence targets the computer’s main processor. CINEBENCH plays a scene that makes use of various CPU-intensive features. During the first run, the benchmark uses only one CPU or CPU core to determine a reference value. On computers that have multiple

CPUs or cores, CINEBENCH runs a second test using all available CPU power. The benchmark produces a single-CPU score for all computers, and a multiple-CPU score for those computers with multiple cores.

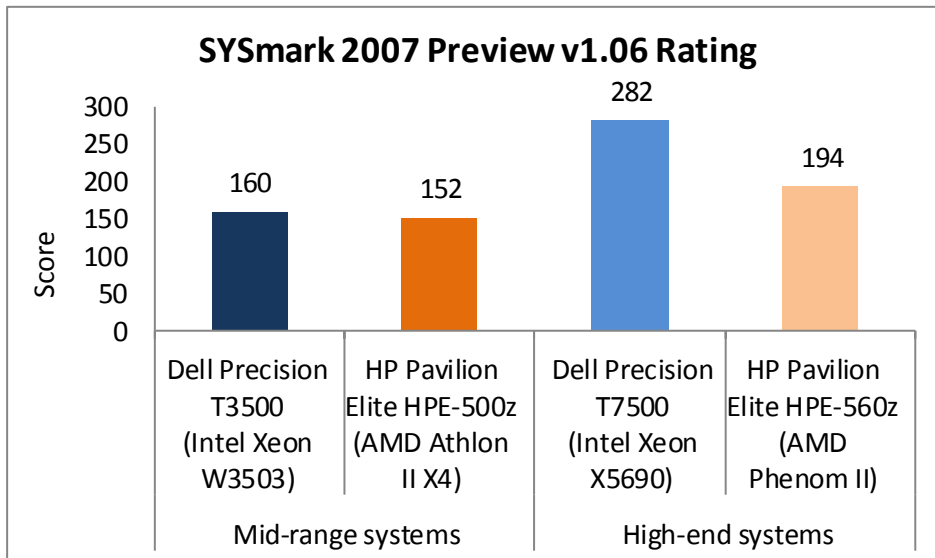

Figure 1: SYSmark 2007 Preview productivity results for our test systems. Higher numbers are better.

Figure 2: CINEBENCH R10 single-CPU test results for our test systems. Higher numbers are better.

As Figure 2 shows, the Dell Precision T3500, with a single-CPU score of 3,415, outperformed the HP Pavilion Elite HPE-500z (which had a score of 3,174) by 7.6 percent. The Dell Precision T7500's single-CPU score of 5,213 was 32.0 percent higher than the HP Pavilion Elite HPE-560z score of 3,948.

As Figure 3 shows, the dual-core Dell Precision T3500, with a multiple-CPU score of 6,686, underperformed the quad-core HP Pavilion Elite HPE-500z (which had a score of 10,879) by 38.5 percent. However, given that the Intel Xeon W3503 has half as many cores as the AMD Athlon II X4, the Dell Precision T3500 competes well with the AMD-based HP Pavilion Elite HPE-500z. The two systems' scores on the CINEBENCH single-CPU test also show this; the Dell

Precision T3500 outperforms the HP Pavilion Elite HPE-500z by almost 8 percent in a core-to-core comparison. The six-core Dell Precision T7500's multiple-CPU score of 28,175 was 54.1 percent higher than the six-core HP Pavilion Elite HPE-560z score of 18,283.

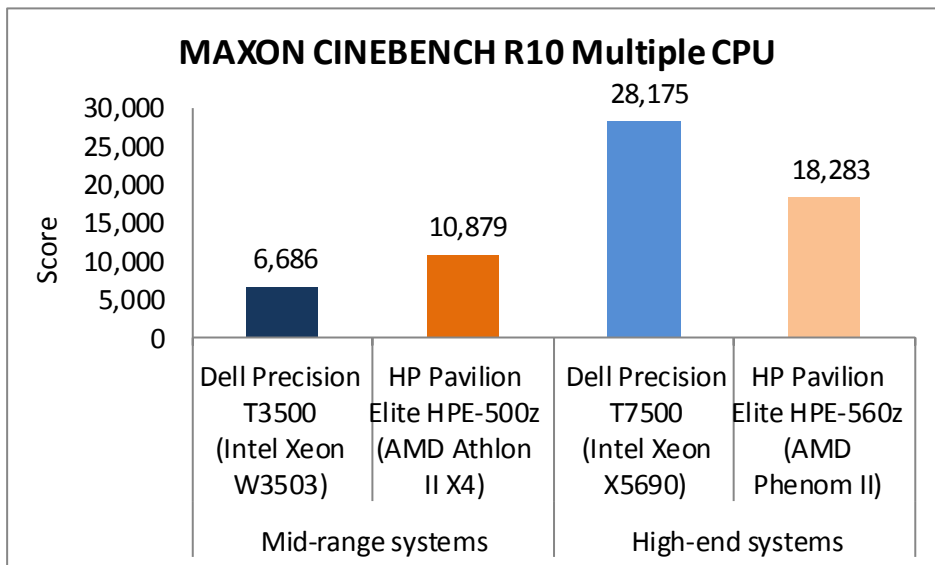

Figure 3: CINEBENCH R10 multiple-CPU test results for our test systems. Higher numbers are better.

Figure 4: SPECint_rate_base_2006 test results for our test systems. Higher numbers are better.

As Figure 4 shows, the Dell Precision T3500, with a SPECint score of 45.7, underperformed the HP Pavilion Elite HPE-500z (which had a score of 57.5) by 20.5 percent. The Dell Precision T7500's SPECint score of 182.0 was 98.0 percent higher than the HP Pavilion Elite HPE-560z score of 91.9.

Figure 5: SPECfp_rate_base_2006 test results for our test systems. Higher numbers are better.

As Figure 5 shows, the Dell Precision T3500, with a SPECfp score of 40.4, underperformed the HP Pavilion Elite HPE-500z (which had a score of 53.7) by 24.8 percent. The Dell Precision T7500's SPECfp score of 124.0 was 62.3 percent higher than the HP Pavilion Elite HPE-560z score of 76.4.

TEST RESULTS

Figures 6 and 7 show a detailed breakdown of benchmark results for the four test systems. These results represent the median of three test runs. [Appendix C](#) presents the results from all three BAPCo SYSmark 2007 and MAXON CINEBENCH runs, and [Appendix E](#) presents detailed results for our SPEC CPU2006 testing.

Mid-range systems	Dell Precision T3500 (Intel Xeon W3503)	HP Pavilion Elite HPE-500z (AMD Athlon II X4)	Percentage improvement with Dell Precision T3500 (Intel Xeon W3503)
BAPCo SYSmark 2007 Preview v1.06	160.0	152.0	5.3%
MAXON CINEBENCH R10 Single CPU	3,415.0	3,174.0	7.6%
MAXON CINEBENCH R10 Multiple CPU	6,686.0	10,879.0	(38.5%)
SPEC CPU2006 SPECint_rate_base_2006	45.7	57.5	(20.5%)
SPEC CPU2006 SPECfp_rate_base_2006	40.4	53.7	98.0%

Figure 6: Benchmark score for the mid-range systems. Higher numbers are better.

High-end systems	Dell Precision T7500 (Intel Xeon X5690)	HP Pavilion Elite HPE-560z (AMD Phenom II)	Percentage improvement with Dell Precision T7500 (Intel Xeon X5690)
BAPCo SYSmark 2007 Preview v1.06	282.0	194.0	45.4%
MAXON CINEBENCH R10 Single CPU	5,213.0	3,948.0	32.0%
MAXON CINEBENCH R10 Multiple CPU	28,175.0	18,283.0	54.1%
SPEC CPU2006 SPECint_rate_base_2006	182.0	91.9	(24.8%)
SPEC CPU2006 SPECfp_rate_base_2006	124.0	76.4	62.3%

Figure 7: Benchmark score for the high-end systems. Higher numbers are better.

SUMMARY

Workers need workstations that allow them to do their jobs, in a timely manner and without the frustration and delays that underperforming systems cause. In our tests, we found that Dell workstations powered by the Intel Xeon processor family outperformed comparable HP workstations. With up to 98.0 percent increased performance over HP systems, Dell workstations are an excellent choice to meet workers' performance and productivity needs.

APPENDIX A – DETAILED SYSTEM CONFIGURATION INFORMATION

Figure 8 presents each test system and the details of its configuration.

System	Dell Precision T3500 (Intel Xeon W3503)	Dell Precision T7500 (Intel Xeon X5690)	HP Pavilion Elite HPE-500z (AMD Athlon II X4)	HP Pavilion Elite HPE-560z (AMD Phenom II)

Figure 8: Configuration information for the four test systems.

APPENDIX B – ABOUT OUR TESTING

SYSmark 2007 Preview v1.06

SYSmark 2007 Preview is a performance metric BAPCo created to measure system performance. SYSmark 2007 Preview determines its overall rating from the mean result from four workload scenarios: e-learning, office productivity, video creation, and 3D modeling. SYSmark 2007 Preview records the time the system takes to complete each individual operation in each scenario.

SYSmark 2007 Preview consists of the following applications and corresponding tasks: Adobe® After® Effects 7 (e-learning), Adobe Illustrator® CS2 (video creation), Adobe Photoshop® CS2 (video creation), Autodesk® 3ds Max® 8 (3D modeling), Macromedia® Flash 8 (e-learning), Microsoft® Excel® 2003 (office productivity), Microsoft Outlook® 2003 (office productivity), Microsoft PowerPoint® 2003 (office productivity), Microsoft Word 2003 (office productivity), Microsoft Project 2003 (office productivity), Microsoft Windows Media™ Encoder 9 series (video creation), Sony® Vegas 7 (video creation), SketchUp 5 (3D modeling), and WinZip® 10.0 (office productivity).

To learn more, visit <http://www.bapco.com/support/sysmark2007preview/Help/Help.html>.

MAXON CINEBENCH R10

CINEBENCH is a free, real-world cross platform test suite designed to evaluate and compare the CPU and graphics performance across various systems and platforms. Based on MAXON CINEMA 4D software, which creates 3D content, the benchmark consists of two main components: the graphics-card performance test, and the CPU performance test.

CINEBENCH uses the processing power of a system to render 3D scenes that stress all available processor cores, and reports performance in points (pts). Higher scores are better, as they indicate a faster processor.

To learn more, visit <http://www.maxon.net>.

SPEC CPU2006

The SPEC CPU2006 workload includes two benchmark suites: CINT2006 and CFP2006. (Note: SPEC and SPECint are trademarks of the Standard Performance Evaluation Corporation.) The CINT2006 benchmark focuses on measuring and comparing compute-intensive integer performance, while CFP2006 measures and compares compute-intensive floating-point performance. We ran both benchmarks.

Figure 9 lists the 12 applications that compose the CINT2006 benchmark. SPEC wrote nine of the applications in C and three (471.omnetpp, 473.astar, 483.xalancbmk) in C++. A CINT2006 run performs each of

the 12 applications three times and reports the median for each. It also calculates the geometric mean of those 12 results to produce an overall score.

Name	Application area
400.perlbench	Programming language
401.bzip2	Compression
403.gcc	C compiler
429.mcf	Combinatorial optimization
445.gobmk	Artificial intelligence: Go
456.hmmer	Search gene sequence
458.sjeng	Artificial intelligence: chess
462.libquantum	Physics/quantum computing
464.h264ref	Video compression
471.omnetpp	Discrete event simulation
473.astar	Path-finding algorithms
483.xalancbmk	XML processing

Figure 9: The applications that make up the CINT2006 benchmark.

Figure 10 lists the 17 applications that compose the CFP2006 benchmark. SPEC wrote six of the applications in FORTRAN, three using C, four using both FORTRAN and C, and four in C++.

A CFP2006 run performs each of the 17 application (tasks) three times and reports the median for each. It also calculates the geometric mean of those 17 results to produce an overall score.

Name	Application area
410.bwaves	Fluid Dynamics
416.gamess	Quantum Chemistry
433.mic	Physics/Quantum Chromodynamics
434.zeusmp	Physics/CFD
435.gromacs	Biochemistry/Molecular Dynamics
436.cactusADM	Physics/General Relativity
437.leslie3d	Fluid Dynamics
444.namd	Biology/Molecular Dynamics
447.dealll	Finite Element Analysis
450.soplex	Linear Programming, Optimization
453.povray	Image Ray-tracing
454.calculix	Structural Mechanics
459.GemsFDTD	Computational Electromagnetics
465.tonto	Quantum Chemistry
470.IBM	Fluid Dynamics
481.wrf	Weather
482.sphinx3	Speech recognition

Figure 10: The applications that make up the CFP2006 benchmark.

Measuring performance with BAPCo SYSmark 2007 Preview v1.06

Setting up the test

1. Reset the system to the base test image.
2. Disable the User Account Control.
 - a. Click Start→Control Panel.
 - b. At the User Accounts and Family Safety settings screen, click Add or remove user account.
 - c. At the User Account Control screen, click Continue.
 - d. Click Go to the main User Accounts page.
 - e. At the Make changes to your user account screen, click Turn User Account Control on or off.
 - f. At the User Account Control screen, click Continue.
 - g. Uncheck Use User Account Control to help protect your computer, and click OK.
 - h. At the You must restart your computer to apply these changes screen, click Restart Now.
3. Purchase and install SYSmark 2007 Preview v1.05 from <https://www.bapcostore.com/store/product.php?productid=16165&cat=251&page=1>.
4. At the Welcome to InstallShield Wizard screen, click Next.
5. At the License Agreement screen, select I accept the terms in the License Agreement, and click Next.
6. At the Choose Destination Location screen, click Next.
7. At the Ready to Install the Program screen, click Install.
8. When the installation is complete, click Finish.

Running the test

1. Launch SYSmark 2007 Preview by double-clicking the desktop icon.

2. Click Run.
3. Select Official Run, choose 3 Iterations, check the box beside run conditioning run, and enter a name for that run.
4. When the benchmark completes and the main SYSmark 2007 Preview menu appears, click Save FDR to create a report.

Record the results for each iteration.

Measuring performance with MAXON CINEBENCH R10

Setting up the test

1. Reset the system to the base test image.
2. Download CINEBENCHR10.zip from <http://www.maxon.net/en/downloads/downloads/cinebench.html>.
3. Right-click the CINEBENCH ZIP file, and choose Extract All.
4. Click Extract.

Running the test

1. Launch CINEBENCH R10 by double-clicking the CINEBENCH R10.exe file in the CINEBENCH R10 folder.
2. Enter the MHz frequency of the processor in the MHz (real freq.) field.
3. Enter a name in the Tester field.
4. Click the Start all tests button.
5. When the picture finishes rendering in multi-processor mode, save the results.
 - a. Click the To Clipboard button.
 - b. Launch notepad and paste the results into an empty notepad document.
 - c. Save the results in the format system_run_N.txt.
6. Close CINEBENCH R10.
7. Reboot the system.
8. Repeat steps 1 through 7 two times, and report the median.

Measuring performance with SPEC CPU2006

SPEC CPU2006 configuration

For the Intel processor -based desktop workstations, we used the latest version of the Intel C/C++ and Fortran compiler. We followed SPEC's standard instructions for building the CINT2006 and CFP2006 executables. After studying the best results for this benchmark on the SPEC Web site, we chose the following software tools:

- Intel C/C++ Compiler 12.0.3.163
- Intel Fortran Compiler 12.0.3.163
- MicroQuill SmartHeap v10 (Multi-Core)

The benchmark requires configuration files. PT used a custom configuration file based on similar tests online. From the SPEC Web site, we chose the most recent (as of the testing for this report) SPEC CPU2006 results that used the above compiler. We used these configuration files, along with modifications to reflect the

appropriate system information about the system under test, in our testing. The configuration files we used appear in [Appendix D](#).

To begin the benchmark, we performed the following steps:

- Open a command prompt.
- Change to the `c:\cpu2006` directory.
- Type `shrc.bat` at the command prompt.
- Type the `runspec` command as recommended in the configuration file for the system you are testing.

When the run completes, the benchmark puts the results in the directory `c:\cpu2006\result`. The result file names are of the form `CFP2006.<number>.<suffix>` and `CINT2006.<number>.suffix`. The suffixes are `html`, `asc`, `raw`, and `pdf`. The number is three digits and associates a result file with its log, e.g., `CFP2006.002.asc` and `log.002`.

[Appendix E](#) provides the `SPECint_rate_base2006` and `SPECfp_rate_base2006` output results for the test systems.

APPENDIX C – DETAILED RESULTS

Figures 11 and 12 present the detailed test results for the systems. For detailed SPEC CPU2006 results, see [Appendix E](#).

Mid-range systems	Dell Precision T3500 (Intel Xeon W3503)			HP Pavilion Elite HPE-500z (AMD Athlon II X4)

# C:\CPU200~1.IC1\bin\runspec --rate 4 -c cpu2006.phenom.cfg -T base --flagsurl=Intel-ic11.0-win32-
revA.xml,Intel-Win32-Platform.xml -o asc int
# output_root was not used for this run
#####
#####
# This is a sample config file. It was tested with:
#
#   Compiler name/version:      Intel Compiler 11.0 , MS VS 2008
#   Operating system version:   Windows Vista (32-bit and 64-bit)
#   Hardware:                   Intel processors supporting
#                               Streaming SIMD Extensions 2
#
# If your platform uses different versions, different
# hardware or operates in a different mode (for
# example, 32- vs. 64-bit mode), there is the possibility
# that this configuration file may not work as-is.
#
# Note that issues with compilation should be directed
# to the compiler vendor. Information about SPEC technical
# support can be found in the techsupport document in the
# Docs directory of your benchmark installation.
#
# This config file uses the SmartHeap library and if you
# do not have a licensed copy, please remove all
# instances of shlW32M.lib from this config file.
#
# Also note that this is a sample configuration. It
# is expected to work for the environment in which
# it was tested; it is not guaranteed that this is
# the config file that will provide the best performance.
#
# Note that you might find a more recent config file for
# your platform with the posted results at
# http://www.spec.org/cpu2006

# This is a sample config file. It was tested with:
#
#   Compiler name/version:      Intel Compiler 11.0 , MS VS 2008
#   Operating system version:   Windows Vista (32-bit and 64-bit)
#   Hardware:                   Intel processors supporting
#                               Streaming SIMD Extensions 2
#
# If your platform uses different versions, different
# hardware or operates in a different mode (for
# example, 32- vs. 64-bit mode), there is the possibility
# that this configuration file may not work as-is.
#
# Note that issues with compilation should be directed
# to the compiler vendor. Information about SPEC technical
# support can be found in the techsupport document in the
# Docs directory of your benchmark installation.
#
# This config file uses the SmartHeap library and if you
# do not have a licensed copy, please remove all
# instances of shlW32M.lib from this config file.
#
# Also note that this is a sample configuration. It
# is expected to work for the environment in which
# it was tested; it is not guaranteed that this is
# the config file that will provide the best performance.
#
#
# Note that you might find a more recent config file for
# your platform with the posted results at
# http://www.spec.org/cpu2006

APPENDIX E – DETAILED SPEC CPU2006 RESULTS

Mid-range systems

Dell Precision T3500 (Intel Xeon W3503)

Hardware	Software
CPU Name: Intel Xeon W3503	Operating System: Windows 7 Ultimate w/ SP1 (64-bit)
CPU Characteristics:	Compiler: Intel C++ Compiler XE for IA-32 Version 12.0.4.196 Build 20110427 Microsoft Visual Studio Professional 2008 SP1 (for libraries)
CPU MHz: 2400	Auto Parallel: No
FPU: Integrated	File System: NTFS
CPU(s) enabled: 2 cores, 1 chip, 2 cores/chip	System State: Default
CPU(s) orderable: 1 chip	Base Pointers: 32-bit
Primary Cache: 32 KB I + 32 KB D on chip per core	Peak Pointers: 32-bit
Secondary Cache: 256 KB I+D on chip per core	Other Software: MicroQuill SmartHeap Library 10 (Multi-Core) from http://www.microquill.com/
L3 Cache: 4 MB I+D on chip per chip	
Other Cache: None	
Memory: 4 GB (4x1 GB DDR3-8500E)	
Disk Subsystem: 1 x 500 GB SATA 7200 RPM	
Other Hardware: None

ABOUT PRINCIPLED TECHNOLOGIES

Principled Technologies, Inc.
1007 Slater Road, Suite 300
Durham, NC, 27703
www.principledtechnologies.com

We provide industry-leading technology assessment and fact-based marketing services. We bring to every assignment extensive experience with and expertise in all aspects of technology testing and analysis, from researching new technologies, to developing new methodologies, to testing with existing and new tools.

When the assessment is complete, we know how to present the results to a broad range of target audiences. We provide our clients with the materials they need, from market-focused data to use in their own collateral to custom sales aids, such as test reports, performance assessments, and white papers. Every document reflects the results of our trusted independent analysis.

We provide customized services that focus on our clients' individual requirements. Whether the technology involves hardware, software, Web sites, or services, we offer the experience, expertise, and tools to help our clients assess how it will fare against its competition, its performance, its market readiness, and its quality and reliability.

Our founders, Mark L. Van Name and Bill Catchings, have worked together in technology assessment for over 20 years. As journalists, they published over a thousand articles on a wide array of technology subjects. They created and led the Ziff-Davis Benchmark Operation, which developed such industry-standard benchmarks as Ziff Davis Media's Winstone and WebBench. They founded and led eTesting Labs, and after the acquisition of that company by Lionbridge Technologies were the head and CTO of VeriTest.

Principled Technologies is a registered trademark of Principled Technologies, Inc.
